原文内容

This research kicks off with a conceptual review of IT O&M services and relationship marketing, drawing on existing theoretical literature.

99.9%(1858)

We used questionnaire surveys and in-depth interviews to build the empirical foundation, applying the 4R marketing framework to look into YH Company's marketing strategy. What we found is several notable weaknesses: solutions that appear largely indistinguishable from competitors', slow adaptation when customer demands shift, a customer relationship management approach spread too thin to deliver real impact, and a mismatch between what customers invest and the value they receive. The paper then traces back to where these issues stem from.

We start by examining the external macro environment and competitive landscape through PEST and Porter's Five Forces, then use SWOT to assess internal and external factors in a systematic way. Building on this groundwork, the study puts forward several optimization measures for YH Company's marketing strategy: upgrading modular solution offerings, setting up an agile market monitoring system that can respond with precision, refining a three-tier relationship cultivation pathway, and building out a framework for value quantification and communication. To make sure these changes actually stick, we propose safeguard measures covering organizational structure, funding allocation, and technology support.

This study sets out to craft a marketing strategy that lets YH Company pull together its existing resource advantages and lift its current performance to a higher level. Beyond that, it provides actionable guidance for IT O&M service providers trying to break free from commoditized competition and build stickier customer relationships. The work also pushes the 4R framework into the professional O&M space, which helps to support broader industry advancement.

说明:

- 1、支持中、英文内容检测;
- 2、AI特征值=AI特征字符数/总字符数;
- 3、红色代表AI特征显著部分, 计入AI特征字符数;
- 4、棕色代表AI特征疑似部分, 未计入AI特征字符数;
- 5、检测结果仅供参考, 最终判定是否存在学术不端行为时, 需结合人工复核、机构审查以及具体学术政策的综合应用进行审慎判断。
